

Connector Practical Design-Partner Target List v2

100 North American Companies Filtered for Real Pilot Practicality

USA and Canada only

What changed from the broad list

This version is intentionally stricter than the original 100-company universe. It is optimized for current founder-led reality, not theoretical market size.

- **Kept:** companies with strong workflow pain, visible AI execution complexity, likely pilot budget, and a believable path to an early collaboration.
- **Removed or de-emphasized:** hyperscalers, frontier labs, very large incumbents, and companies likely to be too slow, too political, or too internally capable for an early design-partner motion.
- **Preferred:** growth-stage or focused enterprise startups with one clear workflow surface, one likely buyer, and a bounded pilot that can prove value quickly.

Ground-reality filter

A company stays on this v2 list only if most of the following are true:

- The pain is already live in production or close to production.
- There is a plausible budget owner for a small paid pilot.
- The workflow can be bounded to one concrete use case.
- The buyer is likely an engineering, platform, operations, or product owner with enough urgency to try an early collaboration.
- The company is not so large or mature that it will default to building internally or burying the motion in procurement.

Executive summary

- **ICP1 total:** 50 companies.
- **ICP2 total:** 30 companies.
- **ICP3 total:** 20 companies.
- **Best immediate wedge:** support automation, enterprise work AI, contact center AI, AI workflow tooling, and regulated workflow automation with high audit pressure.
- **Best initial buyer shape:** VP Engineering, Head of AI, Head of Support Technology, Head of Risk Platform, Legal Ops leader, or healthcare operations / product leader.

ICP1: Internal Fix Loop — 50 companies

Ada

- **HQ / ICP:** Toronto, Canada / ICP1
- **Pain:** Autonomous support workflows are core to the product, so runtime mistakes directly hurt containment, escalation load, and CSAT.
- **Budget:** Enterprise support automation already carries budget and ROI pressure.
- **Likely buyer:** VP Engineering, Head of AI, VP CX Technology
- **Access:** Medium
- **Onboarding:** Medium-High
- **Collaboration fit:** Growth-stage and category-native; technically credible but still realistic for collaboration.
- **Why now:** Good blend of pain, budget, and a bounded first pilot.

Decagon

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** The company openly talks about testing, observability, experimentation, and keeping agents reliable as they evolve.
- **Budget:** Support automation budgets are active and tied to efficiency and service quality.
- **Likely buyer:** Head of AI Engineering, VP Product, CTO
- **Access:** Medium
- **Onboarding:** Medium-High
- **Collaboration fit:** Strong conceptual fit and still young enough to try sharp external tooling.
- **Why now:** One of the clearest matches to the execution-control wedge.

Forethought

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** Public messaging highlights duplicated workflows, wrong answers, fallback logic, and fact verification.
- **Budget:** Support leaders already buy automation and quality-improvement tools.
- **Likely buyer:** VP Support Technology, CTO
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Clear workflow pain with visible operational stakes.
- **Why now:** Very strong early design-partner shape.

Observe.AI

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** Contact center AI requires predictable outcomes, enforced steps, and reliable real-time behavior.
- **Budget:** CX and call-center budgets are real and often urgent.
- **Likely buyer:** VP CX Operations, Head of AI Platform
- **Access:** Medium-High
- **Onboarding:** High
- **Collaboration fit:** Pain is very real, though integrations into live call operations increase onboarding work.
- **Why now:** Good if the pilot is framed around one critical workflow.

Gorgias

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** The AI agent is expected to learn brand rules, customer context, and workflows, which creates direct execution risk.
- **Budget:** Ecommerce support and automation budgets are practical and ROI-oriented.
- **Likely buyer:** VP Support, VP Engineering
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Fast-moving company with visible workflow automation use cases.
- **Why now:** Strong mix of accessibility and commercial urgency.

Intercom

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** Fin AI Agent already sits inside workflows, triage rules, and handoffs where brittle execution creates support pain.
- **Budget:** Support and platform budgets are already allocated around Fin and workflow automation.
- **Likely buyer:** VP Support Engineering, Head of AI Product
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** More mature than early startups, but still concrete and workflow-native.
- **Why now:** Useful if approached through one bounded workflow-control problem.

Assembled

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** Support operations teams actively tune staffing, routing, and automation quality, so runtime issues are very practical.
- **Budget:** Buyer teams already pay for support operations infrastructure.
- **Likely buyer:** Head of Support Operations, VP Engineering
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Approachable compared with large incumbents and has a tight workflow surface.
- **Why now:** High practical value for a first design-partner motion.

Fullview

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** AI-assisted support resolution and workflow automation are close enough to the pain and narrow enough to pilot quickly.
- **Budget:** Smaller teams still spend on tools that reduce support load quickly.
- **Likely buyer:** Head of Support, VP Product
- **Access:** Medium-Low
- **Onboarding:** Low-Medium
- **Collaboration fit:** Smaller and more collaborative than major vendors.
- **Why now:** One of the easiest ICP1 pilot candidates.

Pylon

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** Pylon is AI-native B2B support, so workflow handling, account context, and busywork automation are central.
- **Budget:** Support and post-sales ops budgets are practical and near-term.
- **Likely buyer:** VP Support, CTO, Head of Product
- **Access:** Medium-Low
- **Onboarding:** Low-Medium
- **Collaboration fit:** Focused workflow scope and younger company profile increase openness.
- **Why now:** Excellent practical addition relative to bigger incumbents.

Open

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** Open explicitly positions around enterprise AI customer support where business rules and workflow logic are too complex for basic agents.
- **Budget:** The company sells into a budget line that already exists: enterprise support transformation.
- **Likely buyer:** Founder, CTO, Head of Product
- **Access:** Medium-Low
- **Onboarding:** Low-Medium
- **Collaboration fit:** Very strong early-collaboration profile because the product is still defining category shape.
- **Why now:** Good example of a company likely to feel the pain now rather than later.

Maven AGI

- **HQ / ICP:** Boston, USA / ICP1
- **Pain:** Agentic support automation is the product itself, which makes runtime control a first-order operational need.
- **Budget:** Enterprise support budgets are already attached to this motion.
- **Likely buyer:** VP CX Engineering, CTO
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Focused enough to pilot, credible enough to pay.
- **Why now:** A clean wedge target.

DevRev

- **HQ / ICP:** Palo Alto, USA / ICP1
- **Pain:** Support, product, and conversational workflows meet in one system, creating real execution complexity.
- **Budget:** The company sells AI-native service operations, so there is likely budget and internal urgency.
- **Likely buyer:** VP Support Engineering, CTO
- **Access:** Medium
- **Onboarding:** Medium-High
- **Collaboration fit:** Still startup-like enough to collaborate, but technical depth is real.
- **Why now:** Practical if the pitch is specific and execution-layer focused.

Netomi

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** Policy-aware customer service AI is already close to runtime control pain.
- **Budget:** Customer experience automation already has budget and measurable ROI.
- **Likely buyer:** VP CX Operations, CTO
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** A credible, focused category player with real operational pain.
- **Why now:** Good practical fit.

Cresta

- **HQ / ICP:** Palo Alto, USA / ICP1
- **Pain:** Human and AI agents share live contact-center workflows where quality failures are visible and expensive.
- **Budget:** Contact-center budgets are large and operationally driven.
- **Likely buyer:** VP Contact Center Technology, CTO
- **Access:** Medium
- **Onboarding:** Medium-High
- **Collaboration fit:** Pain is real, though live ops integration is heavier than simpler support products.
- **Why now:** Worth keeping because budget is strong and workflow stakes are obvious.

Sierra

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** Decisioning, next-best-action workflows, and engineering-owned agent behavior create exactly the right runtime-control problem.
- **Budget:** Enterprise CX budgets are real, though buyer sophistication is high.
- **Likely buyer:** VP Engineering, CTO, Head of CX Platform
- **Access:** Medium-High
- **Onboarding:** Medium-High
- **Collaboration fit:** A sharper fit than general AI companies, but still not the easiest first target.
- **Why now:** Keep as a higher-value but slightly harder account.

Meya

- **HQ / ICP:** Canada / ICP1
- **Pain:** Programmable support automation means workflow logic and runtime behavior are central, not incidental.
- **Budget:** Support tooling budgets are real and bounded.
- **Likely buyer:** Head of Support Technology, CTO
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** More focused and likely more open than the largest category players.
- **Why now:** Good practical replacement for less reachable incumbents.

Regal.ai

- **HQ / ICP:** New York, USA / ICP1
- **Pain:** AI phone agents and customer journeys create concrete execution and workflow-state problems.
- **Budget:** Revenue and contact-center budgets exist and are performance-driven.
- **Likely buyer:** VP Contact Center, VP Growth Operations
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Focused workflow domain with obvious business value.
- **Why now:** Good fit where the wedge is framed as reliable execution, not just automation.

Front

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** Shared inbox and customer operations workflows create quiet routing and action failures that teams actively try to fix.
- **Budget:** Operations and support budgets are practical and owned by clear teams.
- **Likely buyer:** VP Operations Systems, Head of Support Technology
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Concrete workflow surface and less enterprise drag than huge incumbents.
- **Why now:** Practical and reachable.

Kustomer

- **HQ / ICP:** New York, USA / ICP1
- **Pain:** AI triage, routing, and customer-service workflow automation sit right inside the execution problem.
- **Budget:** Customer-service budgets already exist and are tied to resolution and efficiency.
- **Likely buyer:** VP CX Engineering, Head of Support Systems
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Focused enough for a bounded pilot.
- **Why now:** Good if the outreach is workflow-specific.

Gladly

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** Service workflows and agent automation are core to Gladly's product direction.
- **Budget:** Support technology budgets are real and measurable.
- **Likely buyer:** VP CX Technology, CTO
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Reachable with a clear use case and operational metric.
- **Why now:** Still practical despite moderate scale.

Qualified

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** AI SDR and pipeline automation move from assistance into execution, where mistakes can directly lose revenue.
- **Budget:** Revenue-ops and GTM AI budgets are increasingly available.
- **Likely buyer:** VP Growth Engineering, VP RevOps
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Smaller and more focused than the biggest revenue-AI companies.
- **Why now:** Good practical fit if pitched around execution risk in revenue flows.

Paradox

- **HQ / ICP:** Scottsdale, USA / ICP1
- **Pain:** Recruiting workflows with conversational AI are live, repetitive, and operationally sensitive.
- **Budget:** Talent technology budgets exist and buyers feel pain quickly.
- **Likely buyer:** VP Talent Technology, CTO
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** The workflow domain is narrow enough for a fast pilot.
- **Why now:** Useful because onboarding can be tightly scoped.

Beam AI

- **HQ / ICP:** Toronto, Canada / ICP1
- **Pain:** Beam markets enterprise agents that automate critical execution from SOPs, which is very close to your wedge.
- **Budget:** Enterprise workflow-automation budgets are explicit in the category.
- **Likely buyer:** VP Engineering, CTO, Head of Product
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Still in a collaboration-friendly company band.
- **Why now:** A practical replacement for more inaccessible workflow giants.

Kognitos

- **HQ / ICP:** San Jose, USA / ICP1
- **Pain:** Turning operating procedures into AI automation makes runtime control a direct problem.
- **Budget:** Automation budgets exist in operations and shared-services teams.
- **Likely buyer:** VP Automation, CIO, Head of Platform
- **Access:** Medium
- **Onboarding:** Medium-High
- **Collaboration fit:** Good conceptual fit and less impossible than hyperscale workflow vendors.
- **Why now:** Worth keeping as a practical enterprise-automation target.

Retool

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** Internal tools and operational workflows push AI close to real systems, permissions, and actions.
- **Budget:** Internal-tools and ops-platform budgets are real in growth companies.
- **Likely buyer:** Head of Internal Tools, VP Engineering
- **Access:** Medium
- **Onboarding:** High
- **Collaboration fit:** Still practical if the first pilot is one workflow, not broad platform control.
- **Why now:** Keep because the workflow surface is real and bounded.

Zapier

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** AI agents are now an extension of Zapier's workflow layer, making execution quality matter.
- **Budget:** Automation budgets are common and product-led adoption can coexist with paid pilots.
- **Likely buyer:** Head of AI Automation, VP Product
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Larger than ideal but still more approachable than the biggest enterprise incumbents.
- **Why now:** Useful as a mid-probability account.

Freshworks

- **HQ / ICP:** San Mateo, USA / ICP1
- **Pain:** AI is embedded in support and service workflows where reliability and handoff quality matter.
- **Budget:** Support and employee-service budgets are already established.
- **Likely buyer:** VP Product, CTO, Head of AI
- **Access:** Medium-High
- **Onboarding:** Medium
- **Collaboration fit:** A bit larger, but still more practical than Zendesk or ServiceNow.
- **Why now:** Good to keep as a credible medium-difficulty target.

Dialpad

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** Voice, contact-center, and real-time AI workflows are execution sensitive by default.
- **Budget:** CX and communications budgets are clear and already owned.
- **Likely buyer:** VP CX Technology, Head of AI Product
- **Access:** Medium-High
- **Onboarding:** Medium
- **Collaboration fit:** Pain is real and measurable, though the wedge must be runtime-specific.
- **Why now:** Practical enough to keep.

Symbl.ai

- **HQ / ICP:** Seattle, USA / ICP1
- **Pain:** Conversation intelligence tied to workflow actions creates a path into execution control.
- **Budget:** Platform and product teams pay for workflow-aware AI layers.
- **Likely buyer:** Head of AI Platform, VP Product
- **Access:** Medium
- **Onboarding:** Medium-High
- **Collaboration fit:** Smaller and more focused than many incumbents.
- **Why now:** A reasonable practical target if the use case is narrow.

Aisera

- **HQ / ICP:** Palo Alto, USA / ICP1
- **Pain:** Cross-functional AI workflows across IT, HR, finance, and support create real runtime failure modes.
- **Budget:** Enterprise automation budgets are large and visible.
- **Likely buyer:** VP Engineering, CIO, Head of Automation
- **Access:** High
- **Onboarding:** High
- **Collaboration fit:** More enterprise-heavy, but pain and budget are undeniably real.
- **Why now:** Keep as a higher-budget target, not a first-wave easy target.

Moveworks

- **HQ / ICP:** Mountain View, USA / ICP1
- **Pain:** Internal employee workflows are exactly where execution mistakes create operational pain.
- **Budget:** Large IT and employee-support budgets are available.
- **Likely buyer:** Head of AI Platform, CTO
- **Access:** High
- **Onboarding:** High
- **Collaboration fit:** Harder access, but still more grounded than pure frontier labs.
- **Why now:** Keep because pain and budget are both strong.

Glean

- **HQ / ICP:** Palo Alto, USA / ICP1
- **Pain:** Cross-system enterprise agents make orchestration and execution quality central issues.
- **Budget:** Work AI budgets are active in enterprises adopting internal agents.
- **Likely buyer:** Head of AI Platform, VP Engineering
- **Access:** High
- **Onboarding:** High
- **Collaboration fit:** Not easy, but still closer to the problem than many broad AI companies.
- **Why now:** Keep as a high-value harder account.

Coveo

- **HQ / ICP:** Quebec, Canada / ICP1
- **Pain:** Agentic self-service and agent workflows create a direct intersection of retrieval quality and runtime action quality.
- **Budget:** Enterprise search and service budgets are real and owned.
- **Likely buyer:** VP Product, CTO
- **Access:** Medium-High
- **Onboarding:** High
- **Collaboration fit:** A bit heavier on onboarding, but strong business value and clear buyer ownership.
- **Why now:** Useful in Canada and for regulated-service motions.

Workato

- **HQ / ICP:** Mountain View, USA / ICP1
- **Pain:** AI agents layered onto enterprise automation make execution control a natural adjacent need.
- **Budget:** Automation budgets are clear and usually owned by platform or business-systems teams.
- **Likely buyer:** VP Automation, Enterprise Architect
- **Access:** High
- **Onboarding:** High
- **Collaboration fit:** Less ideal than smaller startups, but still practical enough for the list.
- **Why now:** Keep as a strategic but not first-wave target.

Rippling

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** Cross-functional ops across IT, HR, and finance make action quality and policy-safe execution materially important.
- **Budget:** Operations software budgets are real and valuable.
- **Likely buyer:** CTO, Head of Platform
- **Access:** High
- **Onboarding:** High
- **Collaboration fit:** Access is harder, but the pain is very concrete.
- **Why now:** A harder but still grounded account.

HubSpot

- **HQ / ICP:** Cambridge, USA / ICP1
- **Pain:** AI agents in support and GTM workflows create a real execution layer need.
- **Budget:** GTM and support AI budgets are available.
- **Likely buyer:** GM AI, VP Product
- **Access:** High
- **Onboarding:** Medium
- **Collaboration fit:** Bigger and more mature, but still more practical than the largest enterprise stack vendors.
- **Why now:** Keep as medium-probability, not top-priority.

Gong

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** Revenue AI is moving from visibility into guided action, where sequence and execution quality matter.
- **Budget:** Revenue operations budgets are active and pain is measurable.
- **Likely buyer:** VP Revenue Systems, Head of AI Product
- **Access:** Medium-High
- **Onboarding:** Medium
- **Collaboration fit:** The wedge needs sharper framing but the buyer pain exists.
- **Why now:** Good if approached through one execution failure pattern.

Clari

- **HQ / ICP:** Sunnyvale, USA / ICP1
- **Pain:** Revenue workflows increasingly include AI-guided actions, and wrong execution can be expensive.
- **Budget:** Revenue-tech budgets are real and owner-led.
- **Likely buyer:** VP Revenue Operations, CTO
- **Access:** Medium-High
- **Onboarding:** Medium
- **Collaboration fit:** More practical than giant incumbents, though not as strong as support-focused companies.
- **Why now:** Keep as a secondary GTM-workflow target.

Outreach

- **HQ / ICP:** Seattle, USA / ICP1
- **Pain:** Sales execution workflows increasingly rely on AI recommendations and automation.
- **Budget:** Revenue-tech budgets already exist and are owned by RevOps.
- **Likely buyer:** VP RevOps, CTO
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Reachable enough and operationally measurable.
- **Why now:** A practical secondary target.

Salesloft

- **HQ / ICP:** Atlanta, USA / ICP1
- **Pain:** AI-guided sales workflows have clear sequence, state, and execution-quality problems.
- **Budget:** Revenue-tech budgets are real and often tied to productivity goals.
- **Likely buyer:** VP RevOps, CTO
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Not the strongest wedge, but still practical.
- **Why now:** Keep as a secondary account.

Talkdesk

- **HQ / ICP:** Palo Alto, USA / ICP1
- **Pain:** Contact-center AI creates direct cost and service-quality pain when execution fails.
- **Budget:** CX budgets are large and operational.
- **Likely buyer:** VP Contact Center Technology, CTO
- **Access:** High
- **Onboarding:** Medium-High
- **Collaboration fit:** More enterprise-heavy, but the pain is concrete and monetizable.
- **Why now:** Harder than smaller support players but still relevant.

Pypestream

- **HQ / ICP:** New York, USA / ICP1
- **Pain:** Enterprise customer engagement automation creates visible workflow execution and containment issues.
- **Budget:** Digital-service and support budgets are usually defined.
- **Likely buyer:** VP Digital Service, Head of Automation
- **Access:** Medium-High
- **Onboarding:** High
- **Collaboration fit:** Practical but more enterprise-heavy.
- **Why now:** Keep as a later-wave target.

Kore.ai

- **HQ / ICP:** Orlando, USA / ICP1
- **Pain:** Enterprise AI agents across service functions create continuous runtime tuning needs.
- **Budget:** Large assistant and automation budgets already exist in the category.
- **Likely buyer:** Head of Conversational AI, VP Product
- **Access:** Medium-High
- **Onboarding:** High
- **Collaboration fit:** Heavier onboarding than smaller startups, but still category-relevant.
- **Why now:** Useful as a strategic target, not a fast first pilot.

Amelia

- **HQ / ICP:** New York, USA / ICP1
- **Pain:** Digital employee workflows and service automation create a direct runtime-control problem.
- **Budget:** Enterprise automation buyers already spend here.
- **Likely buyer:** SVP Automation, VP Engineering
- **Access:** Medium-High
- **Onboarding:** High
- **Collaboration fit:** Some enterprise drag, but less disqualified than hyperscale names.
- **Why now:** A practical but harder account.

Ema

- **HQ / ICP:** Mountain View, USA / ICP1
- **Pain:** Universal AI employees operating across functions create broad execution and policy pain.
- **Budget:** Enterprise transformation budgets exist for this class of product.
- **Likely buyer:** CTO, Head of AI Transformation
- **Access:** Medium-High
- **Onboarding:** High
- **Collaboration fit:** The promise is broad, so the first pilot must be narrow.
- **Why now:** Keep because the problem is real and the company is still shaping the category.

Capacity

- **HQ / ICP:** St. Louis, USA / ICP1
- **Pain:** Customer and employee support automation puts AI directly into workflow handling.
- **Budget:** Support and service budgets are real and easy to justify with efficiency gains.
- **Likely buyer:** VP Product, CTO
- **Access:** Medium-Low
- **Onboarding:** Medium
- **Collaboration fit:** Focused enough to be realistic and collaborative.
- **Why now:** A better practical target than very large service incumbents.

Uniphore

- **HQ / ICP:** Palo Alto, USA / ICP1
- **Pain:** Conversation automation, agent assist, and workflow execution in service environments create real runtime issues.
- **Budget:** CX automation budgets are large and existing.
- **Likely buyer:** VP Product, CTO
- **Access:** Medium-High
- **Onboarding:** Medium-High
- **Collaboration fit:** Bigger than ideal but still in the pain zone.
- **Why now:** Keep as a stronger-value backup account.

SupportLogic

- **HQ / ICP:** San Jose, USA / ICP1
- **Pain:** Support operations teams use AI to spot service risk and workflow issues, creating a natural bridge to execution control.
- **Budget:** Support leaders already fund tooling that reduces churn, escalations, and handling cost.
- **Likely buyer:** VP Support Ops, CTO
- **Access:** Medium-Low
- **Onboarding:** Low-Medium
- **Collaboration fit:** Smaller and focused; easier to work with than large platform vendors.
- **Why now:** Very practical for early collaboration.

UnitQ

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** Customer feedback intelligence and workflow correction tie directly into teams trying to fix broken service flows.
- **Budget:** Customer quality and support budgets already exist.
- **Likely buyer:** VP Product, Head of Customer Operations
- **Access:** Medium-Low
- **Onboarding:** Low-Medium
- **Collaboration fit:** Focused product and likely openness to category-adjacent collaboration.
- **Why now:** Practical add because buyer pain is live and specific.

Regie.ai

- **HQ / ICP:** San Francisco, USA / ICP1
- **Pain:** Revenue workflow automation and AI sequencing create execution-quality issues in GTM operations.
- **Budget:** Revenue productivity budgets are already present in growth companies.
- **Likely buyer:** VP RevOps, CTO
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Smaller and easier to reach than major GTM platforms.
- **Why now:** A practical GTM-workflow target.

ICP2: Experimentation Labs — 30 companies

LangChain

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** Agents, orchestration, and workflow behavior are the product, so instability is visible and constant.
- **Budget:** AI infrastructure budgets are real and product-led in this category.
- **Likely buyer:** VP Product, CTO, Head of Platform
- **Access:** Medium
- **Onboarding:** Low-Medium
- **Collaboration fit:** The team understands the problem deeply and still moves fast.
- **Why now:** One of the best practical ICP2 targets.

LlamaIndex

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** Agent data flows, orchestration, and production workflows are all core to the company.
- **Budget:** Product and platform budgets exist around deployment and agent tooling.
- **Likely buyer:** Head of Product, CTO
- **Access:** Medium
- **Onboarding:** Low-Medium
- **Collaboration fit:** Highly relevant and still collaboration-friendly.
- **Why now:** Very practical ICP2 fit.

Braintrust

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** The company already lives in evals and quality loops, so the jump to execution control is easy to understand.
- **Budget:** AI quality budgets are active in teams moving agents toward production.
- **Likely buyer:** CTO, Head of Product
- **Access:** Medium
- **Onboarding:** Low
- **Collaboration fit:** Category education cost is low and pain is familiar.
- **Why now:** Excellent practical fit.

Arize AI

- **HQ / ICP:** Berkeley, USA / ICP2
- **Pain:** Observability and eval infrastructure customers often still lack a runtime enforcement layer.
- **Budget:** Budgets already exist for AI quality and production monitoring.
- **Likely buyer:** VP Product, CTO
- **Access:** Medium
- **Onboarding:** Low-Medium
- **Collaboration fit:** Strong conceptual bridge and realistic buyer path.
- **Why now:** Good wedge after observability.

Galileo

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** The company sees end-to-end visibility and agent evaluation gaps, but does not itself close execution.
- **Budget:** AI quality budgets are already real in their customer base.
- **Likely buyer:** VP Product, CTO
- **Access:** Medium
- **Onboarding:** Low-Medium
- **Collaboration fit:** Focused category and easier design-partner logic than frontier labs.
- **Why now:** Practical and adjacent.

Maxim AI

- **HQ / ICP:** USA / ICP2
- **Pain:** Tracking how agents reason across multi-step tasks is already near the runtime-control problem.
- **Budget:** AI quality and evaluation budgets are practical in this market.
- **Likely buyer:** Head of Product, CTO
- **Access:** Medium
- **Onboarding:** Low
- **Collaboration fit:** Smaller and focused enough to collaborate.
- **Why now:** Very practical ICP2 target.

Patronus AI

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** Evaluation, safety, and trust are all precursors to runtime enforcement.
- **Budget:** Teams already budget for trust and quality as agents reach production.
- **Likely buyer:** Head of Product, CTO
- **Access:** Medium
- **Onboarding:** Low-Medium
- **Collaboration fit:** Focused and category-aware.
- **Why now:** Good practical target.

Confident AI

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** The company is built around tailored validation and pre/post deployment evals, which is directly adjacent.
- **Budget:** Smaller AI quality startups tend to buy sharper workflow tooling faster.
- **Likely buyer:** Founder, CTO
- **Access:** Medium-Low
- **Onboarding:** Low
- **Collaboration fit:** High openness to category-shaping collaboration.
- **Why now:** Very practical.

Vellum

- **HQ / ICP:** New York, USA / ICP2
- **Pain:** Prompt orchestration, evaluation, and enterprise workflow AI are all close to the pain you sell.
- **Budget:** Budgets are tied to making production AI actually work.
- **Likely buyer:** Founder, Head of Product
- **Access:** Medium-Low
- **Onboarding:** Low
- **Collaboration fit:** Focused workflow scope and startup-stage openness.
- **Why now:** One of the best practical ICP2 targets.

Stack AI

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** Building and deploying AI workflows is the product, so runtime instability is impossible to ignore.
- **Budget:** Workflow budgets are already near the product and engineering team.
- **Likely buyer:** Founder, CTO
- **Access:** Medium-Low
- **Onboarding:** Low
- **Collaboration fit:** Fast-moving and collaboration-friendly.
- **Why now:** Excellent practical fit.

Replit

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** Coding agents and execution loops create real reliability pain in day-to-day product behavior.
- **Budget:** AI product budgets are active and customer-facing reliability matters.
- **Likely buyer:** Head of AI, VP Engineering
- **Access:** Medium-High
- **Onboarding:** Medium
- **Collaboration fit:** More reachable than frontier labs and the problem is very real.
- **Why now:** Useful higher-value ICP2 target.

Anysphere (Cursor)

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** Agentic coding inside real developer workflows creates state, tool, and execution problems quickly.
- **Budget:** Coding-agent budgets and usage growth make reliability a practical concern.
- **Likely buyer:** Head of Product, CTO
- **Access:** High
- **Onboarding:** Medium
- **Collaboration fit:** Hot company, but still smaller than hyperscaler-scale targets.
- **Why now:** Worth keeping, though not first-wave easiest.

Codeium (Windsurf)

- **HQ / ICP:** Mountain View, USA / ICP2
- **Pain:** Agents operate across files, tools, and terminal workflows, which makes runtime control directly relevant.
- **Budget:** AI developer-tool budgets are active and growing.
- **Likely buyer:** Head of Product, VP Engineering
- **Access:** Medium-High
- **Onboarding:** Medium
- **Collaboration fit:** Still practical enough for a focused collaboration story.
- **Why now:** Good ICP2 target.

Augment Code

- **HQ / ICP:** USA / ICP2
- **Pain:** Code-generation agents create execution-quality issues in real developer workflows.
- **Budget:** Developer AI budgets are practical in growth-stage teams.
- **Likely buyer:** VP Engineering, Head of Product
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Smaller and more collaboration-friendly than top frontier names.
- **Why now:** Practical addition.

Factory

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** Agentic software engineering requires better reliability when moving from experimentation to repeatable execution.
- **Budget:** Platform and engineering budgets are active around productivity and quality.
- **Likely buyer:** CTO, Head of Engineering
- **Access:** Medium-High
- **Onboarding:** Medium
- **Collaboration fit:** Good fit with a technical but still startup-shaped buyer motion.
- **Why now:** Practical if pitched tightly.

E2B

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** Agent execution environments are exactly where runtime control and safe actioning become concrete.
- **Budget:** Engineering teams already pay for infrastructure that lets agents act safely.
- **Likely buyer:** Founder, CTO
- **Access:** Medium-Low
- **Onboarding:** Low-Medium
- **Collaboration fit:** Focused infrastructure company with high category awareness.
- **Why now:** Strong practical fit.

Letta

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** Persistent memory and agent behavior create stateful runtime problems that are hard to debug.
- **Budget:** Smaller infrastructure teams often buy pointed workflow tooling quickly.
- **Likely buyer:** Founder, CTO
- **Access:** Medium-Low
- **Onboarding:** Low
- **Collaboration fit:** Good early-collaboration shape and sharp category fit.
- **Why now:** Practical and relevant.

Vapi

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** Voice agents with real tool execution and call flows have immediate runtime instability risks.
- **Budget:** Voice-AI budgets are active and usage-linked.
- **Likely buyer:** VP Engineering, CTO
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Clear workflow surface and strong pain.
- **Why now:** Practical if framed through one failing voice flow.

Lamini

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** Enterprise model deployment becomes more valuable when applied systems execute reliably, not just score well offline.
- **Budget:** AI platform budgets exist and are tied to shipping production systems.
- **Likely buyer:** CTO, VP Engineering
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Not as direct as eval players, but still practical.
- **Why now:** Keep as a secondary ICP2 target.

Weights & Biases

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** Experiment tracking and monitoring sit right next to the execution-quality problem.
- **Budget:** AI engineering budgets are already allocated here.
- **Likely buyer:** VP Product, Head of MLOps
- **Access:** Medium-High
- **Onboarding:** Medium
- **Collaboration fit:** A bit more mature, but still category-relevant.
- **Why now:** Practical enough to keep.

Hebbia

- **HQ / ICP:** New York, USA / ICP2
- **Pain:** Knowledge-work agents for high-value professional tasks need reliable execution and repeatability.
- **Budget:** Professional-workflow budgets are real and premium.
- **Likely buyer:** VP Product, CTO
- **Access:** Medium-High
- **Onboarding:** Medium
- **Collaboration fit:** Access is harder, but buyer value is high.
- **Why now:** A strong but not easiest account.

Respan

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** Respan positions around tracing agent behavior, surfacing issues, and fixing what breaks faster, which is very close to your wedge.
- **Budget:** Teams already buying observability and eval layers are natural pilot buyers.
- **Likely buyer:** Founder, CTO
- **Access:** Medium-Low
- **Onboarding:** Low
- **Collaboration fit:** Highly relevant and category-aware.
- **Why now:** Excellent practical replacement for frontier-lab targets.

Baseten

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** Serving production AI systems creates real pressure around safe, reliable execution.
- **Budget:** Platform budgets are active and deployment-focused.
- **Likely buyer:** CTO, VP Engineering
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Not as direct as agent-eval startups, but still practical.
- **Why now:** A useful platform-layer target.

BentoML

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** Production model and application serving creates adjacency to runtime behavior and operational control.
- **Budget:** Engineering budgets already exist for deployment and reliability.
- **Likely buyer:** Founder, CTO
- **Access:** Medium-Low
- **Onboarding:** Medium
- **Collaboration fit:** Smaller and more open than larger platform incumbents.
- **Why now:** Practical if framed as execution reliability for AI apps.

Modal

- **HQ / ICP:** New York, USA / ICP2
- **Pain:** Teams building AI workflows on Modal eventually face runtime quality and orchestration pain above raw compute.
- **Budget:** Developer-infrastructure budgets are real in AI-heavy companies.
- **Likely buyer:** CTO, VP Engineering
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Not a perfect fit, but a realistic adjacent target.
- **Why now:** Practical secondary ICP2 account.

Predibase

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** Enterprise AI deployment and customization create downstream workflow reliability problems.
- **Budget:** Platform budgets exist and enterprise teams already pay here.
- **Likely buyer:** CTO, Head of Product
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** More deployment-centric, but still relevant enough.
- **Why now:** Useful as a secondary target.

Comet

- **HQ / ICP:** New York, USA / ICP2
- **Pain:** Experiment management and monitoring sit close to production reliability and evaluation loops.
- **Budget:** ML and AI budgets are already allocated.
- **Likely buyer:** VP Product, CTO
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Mature enough to have budgets, still focused enough to understand the pitch.
- **Why now:** Practical enough for the list.

Gantry

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** Production AI quality and governance are already central to Gantry's problem space.
- **Budget:** Customers already pay to improve production model behavior.
- **Likely buyer:** Founder, CTO
- **Access:** Medium-Low
- **Onboarding:** Low
- **Collaboration fit:** Smaller and focused, with a strong category bridge.
- **Why now:** Good practical ICP2 account.

Tavus

- **HQ / ICP:** San Francisco, USA / ICP2
- **Pain:** Generative video and interactive AI products create workflow reliability and decision-quality problems as products become more agentic.
- **Budget:** Applied AI product budgets are active and experimentation-heavy.
- **Likely buyer:** Head of Product, CTO
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** A less direct but still practical experimentation target.
- **Why now:** Keep as a lower-priority but credible ICP2 name.

CrewAI

- **HQ / ICP:** New York, USA / ICP2
- **Pain:** Multi-agent orchestration is exactly the kind of workflow surface where execution control becomes necessary.
- **Budget:** Agent-building teams already spend on orchestration and workflow tooling.
- **Likely buyer:** Founder, CTO
- **Access:** Medium-Low
- **Onboarding:** Low
- **Collaboration fit:** Very aligned to the problem and likely open to collaboration.
- **Why now:** One of the stronger practical ICP2 additions.

ICP3: Regulated Systems — 20 companies

Plenful

- **HQ / ICP:** San Francisco, USA / ICP3
- **Pain:** Prior auth and pharmacy operations are regulated, repetitive, and workflow-heavy, making runtime control highly relevant.
- **Budget:** Healthcare operations teams already buy tools that cut manual work and increase capacity.
- **Likely buyer:** VP Operations, CTO, Head of Product
- **Access:** Medium
- **Onboarding:** High
- **Collaboration fit:** Growth-stage and focused, with very clear workflow scope.
- **Why now:** One of the best practical ICP3 targets.

Novoflow

- **HQ / ICP:** USA / ICP3
- **Pain:** Novoflow explicitly automates medical operations across EHR-connected workflows, which creates real execution and audit pain.
- **Budget:** Clinic operations budgets are concrete and often tied to staffing shortages.
- **Likely buyer:** Founder, CTO, Head of Operations
- **Access:** Medium-Low
- **Onboarding:** High
- **Collaboration fit:** Very startup-like and likely open to sharp workflow pilots.
- **Why now:** Excellent practical ICP3 addition.

Notable

- **HQ / ICP:** San Mateo, USA / ICP3
- **Pain:** AI agents for healthcare operations and revenue workflows create meaningful control and compliance requirements.
- **Budget:** Operational healthcare budgets exist for automation that reduces denials and manual work.
- **Likely buyer:** VP Product, CTO, COO
- **Access:** Medium-High
- **Onboarding:** High
- **Collaboration fit:** Larger than the smallest startups, but the pain and budget are very real.
- **Why now:** Strong practical healthcare target.

Abridge

- **HQ / ICP:** Pittsburgh, USA / ICP3
- **Pain:** Clinical documentation automation runs in one of the most sensitive workflow environments possible.
- **Budget:** Health-system budgets are large where documentation and clinician time are core pain points.
- **Likely buyer:** CMIO, VP Engineering, CTO
- **Access:** High
- **Onboarding:** Very High
- **Collaboration fit:** Harder access, but the pain and budget are undeniable.
- **Why now:** Keep as a high-value regulated account.

Ambience Healthcare

- **HQ / ICP:** San Francisco, USA / ICP3
- **Pain:** Clinical AI workflows need correctness, traceability, and safe operation inside regulated care settings.
- **Budget:** Healthcare buyers already spend where clinician workflow value is obvious.
- **Likely buyer:** CMIO, VP Product, CTO
- **Access:** High
- **Onboarding:** Very High
- **Collaboration fit:** Complex, but still highly relevant and commercially serious.
- **Why now:** Keep as a premium ICP3 target.

Suki

- **HQ / ICP:** Redwood City, USA / ICP3
- **Pain:** Clinician workflow automation creates real reliability and explainability requirements.
- **Budget:** Clinical productivity budgets are practical and measurable.
- **Likely buyer:** CMIO, CTO, VP Product
- **Access:** High
- **Onboarding:** Very High
- **Collaboration fit:** Harder than startup ops tools, but still grounded in real workflow pain.
- **Why now:** Worth keeping as a higher-value healthcare account.

Infinitus Systems

- **HQ / ICP:** San Francisco, USA / ICP3
- **Pain:** Automated payer-provider phone workflows require safe execution, auditability, and clean handoffs.
- **Budget:** Healthcare ops budgets are increasingly willing to pay for automation here.
- **Likely buyer:** VP Engineering, VP Operations
- **Access:** Medium-High
- **Onboarding:** Very High
- **Collaboration fit:** The workflow pain is sharp and the pilot can be bounded.
- **Why now:** One of the strongest practical regulated targets.

AKASA

- **HQ / ICP:** South San Francisco, USA / ICP3
- **Pain:** Revenue-cycle automation in healthcare has high cost, tight workflows, and clear operational ownership.
- **Budget:** RCM budgets are large and ROI can be measured.
- **Likely buyer:** VP Revenue Cycle Product, CTO
- **Access:** Medium-High
- **Onboarding:** High
- **Collaboration fit:** Strong category pain with clearer operational buyers than frontier healthcare AI.
- **Why now:** Very practical ICP3 fit.

CodaMetrix

- **HQ / ICP:** Boston, USA / ICP3
- **Pain:** Medical coding automation is regulated, workflow-bound, and accuracy-sensitive.
- **Budget:** Revenue-cycle and coding budgets are concrete.
- **Likely buyer:** VP Product, CTO, Revenue Cycle Leader
- **Access:** Medium-High
- **Onboarding:** High
- **Collaboration fit:** Operational scope is clear enough for a focused pilot.
- **Why now:** Good regulated workflow target.

SmarterDx

- **HQ / ICP:** New York, USA / ICP3
- **Pain:** Hospital revenue optimization workflows need explainable, correct, and auditable AI-assisted execution.
- **Budget:** Health-system finance and operations budgets are real.
- **Likely buyer:** VP Product, CTO, Revenue Integrity Leader
- **Access:** Medium
- **Onboarding:** High
- **Collaboration fit:** Focused workflow and visible financial value improve practicality.
- **Why now:** Strong practical healthcare-finance target.

Sardine

- **HQ / ICP:** San Francisco, USA / ICP3
- **Pain:** Fraud and risk workflows need enforcement, not just visibility, especially under growth pressure.
- **Budget:** Risk and fraud budgets are immediate and tied to loss prevention.
- **Likely buyer:** Head of Risk Platform, CTO
- **Access:** Medium-High
- **Onboarding:** High
- **Collaboration fit:** Strong pain, strong budget, still a startup-like enough company shape.
- **Why now:** One of the best fintech ICP3 targets.

Alloy

- **HQ / ICP:** New York, USA / ICP3
- **Pain:** Identity, fraud, and compliance decisions require explainability and policy-safe workflow execution.
- **Budget:** Fintech risk and compliance budgets are durable and urgent.
- **Likely buyer:** Head of Risk Engineering, CTO
- **Access:** Medium-High
- **Onboarding:** High
- **Collaboration fit:** Still practical despite enterprise sensitivity because the buyer problem is so clear.
- **Why now:** Top fintech ICP3 candidate.

Unit21

- **HQ / ICP:** San Francisco, USA / ICP3
- **Pain:** Unit21 now explicitly positions around agentic fraud and AML operations with regulator-ready auditability.
- **Budget:** Risk operations budgets are direct and tied to financial loss and compliance exposure.
- **Likely buyer:** Head of Risk Ops, CTO
- **Access:** Medium
- **Onboarding:** High
- **Collaboration fit:** Category fit is sharp and the company is still collaboration-plausible.
- **Why now:** Excellent practical replacement for less grounded fintech names.

Persona

- **HQ / ICP:** San Francisco, USA / ICP3
- **Pain:** Identity workflows are highly regulated and action-sensitive, making policy-safe execution materially important.
- **Budget:** Identity, fraud, and trust budgets already exist in fintech and marketplaces.
- **Likely buyer:** Head of Identity Product, CTO
- **Access:** Medium
- **Onboarding:** High
- **Collaboration fit:** Clear workflow owner and measurable business value.
- **Why now:** Good practical regulated target.

Oscilar

- **HQ / ICP:** Palo Alto, USA / ICP3
- **Pain:** Risk decisioning and fraud workflows are execution-centric and policy-sensitive by default.
- **Budget:** Risk platform budgets are practical where fraud and underwriting speed both matter.
- **Likely buyer:** Head of Risk Platform, CTO
- **Access:** Medium-Low
- **Onboarding:** Medium-High
- **Collaboration fit:** Smaller and more collaborative than larger incumbents.
- **Why now:** Very practical fintech ICP3 target.

Ocrolus

- **HQ / ICP:** New York, USA / ICP3
- **Pain:** Document-heavy underwriting workflows create a strong need for reliable structured execution and auditability.
- **Budget:** Lending ops and underwriting budgets are real and measurable.
- **Likely buyer:** VP Engineering, Head of Risk Operations
- **Access:** Medium
- **Onboarding:** High
- **Collaboration fit:** Concrete workflow scope and clear buyer.
- **Why now:** Practical ICP3 account.

Trullion

- **HQ / ICP:** New York, USA / ICP3
- **Pain:** Accounting and audit workflows are structured, high-stakes, and explainability-sensitive.
- **Budget:** Finance systems and audit budgets are practical and already allocated.
- **Likely buyer:** CTO, Head of Product, VP Finance Systems
- **Access:** Medium
- **Onboarding:** Medium-High
- **Collaboration fit:** The workflow is bounded and buyer ownership is clear.
- **Why now:** One of the more practical finance-regulation targets.

Spellbook

- **HQ / ICP:** Toronto, Canada / ICP3
- **Pain:** Contract review and drafting require reliable, structured AI behavior inside legal workflows.
- **Budget:** Legal teams already pay to reduce routine contract work.
- **Likely buyer:** Founder, CTO, VP Product
- **Access:** Medium
- **Onboarding:** Medium
- **Collaboration fit:** Focused product, clear pain, and likely openness to collaboration.
- **Why now:** One of the best legal ICP3 targets.

Streamline AI

- **HQ / ICP:** San Francisco, USA / ICP3
- **Pain:** Legal intake and triage are workflow-heavy and directly tied to approvals and compliance.
- **Budget:** Legal ops budgets exist where intake speed and control matter.
- **Likely buyer:** Head of Legal Ops Product, CTO
- **Access:** Medium
- **Onboarding:** High
- **Collaboration fit:** A startup-like company with a narrow workflow surface.
- **Why now:** Very practical regulated legal target.

Ontra

- **HQ / ICP:** San Francisco, USA / ICP3
- **Pain:** Private-markets contract workflows are repetitive, high-value, and trust-sensitive.
- **Budget:** Legal and deal operations budgets are real and tied to throughput.
- **Likely buyer:** VP Product, CTO, Head of Legal AI
- **Access:** Medium
- **Onboarding:** Medium-High
- **Collaboration fit:** Focused legal workflow company with clear buyer ownership.
- **Why now:** A more practical legal target than broader premium legal-AI players.

Practical first 20 to contact

These are the strongest accounts if the goal is highest pain plus strongest chance of a real pilot:

- Ada
- Decagon
- Forethought
- Pylon
- Open
- Assembled
- Fullview
- Observe.AI
- Gorgias
- Maven AGI
- LangChain
- LlamaIndex
- Braintrust
- Vellum
- Stack AI
- Confident AI
- Plenful
- Novoflow
- Sardine
- Spellbook

Who was implicitly removed or de-emphasized

Compared with the broader v1 universe, this practical list intentionally avoids relying on frontier labs and giant incumbents as the core prospect pool. Names like OpenAI, Anthropic, Salesforce, ServiceNow, Zendesk, UiPath, and Pegasystems may still be strategically interesting, but they are not where early design-partner probability is highest for the current stage.

Best next operating pass

The highest-leverage next step is to turn the top 20 into an outreach operating file with:

- named buyer titles per company,
- why the buyer should care now,
- one custom outreach hook,
- one proposed pilot use case,
- and a priority rank from 1 to 20.

That would turn this from a target list into a real founder outbound plan.
